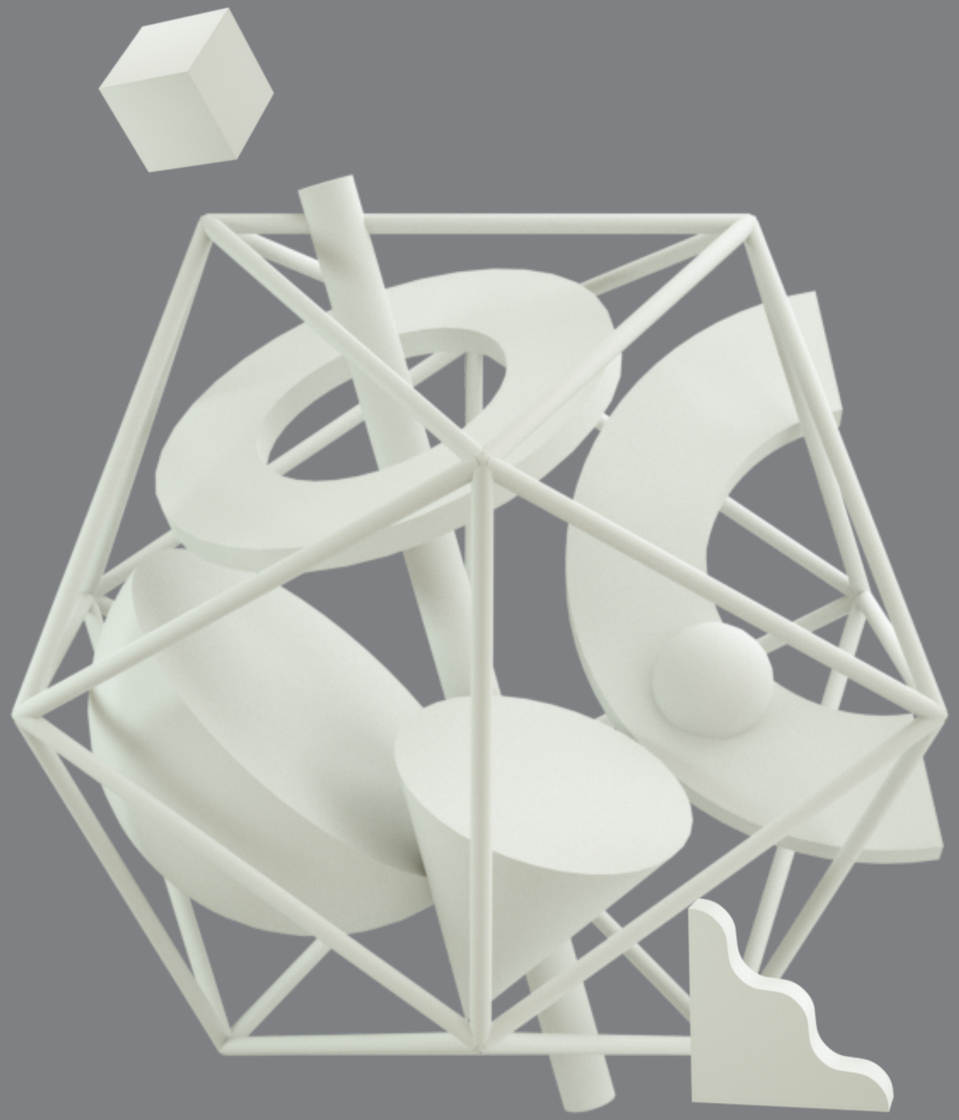
Problem Statement

ANDROID DEVELOPMENT:
Building a language learning app with practice exercises.

Language Learning app? Isn’t this the era of owl mascot?

SignLearn

Learn american sign language at the comfort of home



What is ASL

Sign language is a complete and complex way of communicating that uses hand gestures, facial expressions, and body language to convey meaning. It's not just a series of gestures representing spoken words, but a full-fledged language with its own grammar and syntax.

The Need for Sign Language

it's a great workout for your brain. It immediately breaks the communication barrier and allows you to be a better friend, colleague, lover, and family member to deaf people around you. Even if you don't become proficient, it's the effort that goes a long way.
